

UPS BATTERY BACKUP SYSTEM

COMPUTER POWER PROTECTION

An Uninterrupted Power Supply (UPS) system provides you with backup power when your normal power supply fails.

WHY DO I NEED A UPS?

When there is a power issue, like a blackout, it can cause damage to your electronic equipment, like computers. Aside from preventing you from continuing to work, you could also lose valuable data.

A UPS ensures that power is supplied to your electrical devices during a power outage and it helps regulate electrical flow when the power supply fluctuates outside of the correct voltage levels.

COMPUTER POWER PROTECTION FROM THE EXPERTS

It is especially beneficial to have a UPS if you work from home or have important data stored on your home devices. A UPS will ensure all your devices stay connected or shut off correctly during a power outage, so your data is protected.

If your business systems go down during a power outage, it can be frustrating and also cost you money if you're unable to continue working as normal. Having a UPS system in place for your business can prevent this from happening, by ensuring your computer network, point of sale (POS) systems, and other electronic systems stay up and running.

WHY CHOOSE PC PITSTOP FOR UPS?

Qualified team. Our team of technicians are qualified and well-experienced.

Customised solutions. We can design and deliver a customised UPS system using industry best practices.

Reliable Support. Our service doesn't end after we install your UPS system. We will be on call to give you support.

Transparent prices. We will work with you to find a UPS solution that fits your budget.

Trusted by locals. We have helped thousands of Port Macquarie residents and businesses with their needs.
