

SSD UPGRADES

GIVE YOUR COMPUTER AN INSTANT SPEED BOOST

Installing an SSD in your computer will give you a significant speed boost. This includes everything from your computer booting up quicker, to files opening faster.

SOLID STATE DRIVES

Have you recently noticed your computer slowing down? This is normal once your computer is a few years old, however, before rushing out to buy a new one, it might be worth considering upgrading your computer with an SSD hard drive.

BOOST THE PERFORMANCE OF YOUR COMPUTER

At PC Pitstop, we offer SSD upgrades that will boost the performance of your computer and breathe new life into your device. And, the best part? It's extremely cost-effective.

WHY UPGRADE TO AN SSD?

- **Faster:** Installing an SSD in your computer will give you a significant speed boost.
- **Longer lasting:** If you do upgrade your hard drive to an SSD, you can expect it to last two to three times longer than a traditional HDD.
- **Quieter:** Since they have no moving parts like an HDD, SSDs make less noise when operating.
- **No Overheating:** SSDs don't overheat as frequently as HDDs
- **Save energy:** SSDs reduce the amount of power your laptop uses during operation.

WHY CHOOSE PC PITSTOP?

Award-winning service: Years of experience in providing reliable Business IT Support

Fast turnaround times: We can often upgrade your computer the same day you bring your device into our store.

Reliable Support: 24/7 assistance for any queries or issues

Transparent prices: You'll know exactly how much your SSD upgrade will cost before we start any work.

Trusted by Locals: We have helped thousands of Port Macquarie residents and businesses with their needs.
