DATA BACKUPS

IT'S NOT A MATTER "IF" YOU WILL LOOSE DATA BUT "WHEN".

Never place all your eggs in one basket, make sure you run multiple backups across multiple devices.

DO YOU HAVE MULTIPLE COPIES OF YOUR INFORMATION?

Backing up your files is the basic act of copying all your important files to an external device that can be easily taken off-site each day for security measures in business or easily accessible during an evacuation, keeping precious data and memories safe and saving you time, money and tears. 68% of Hard Drives fail between year three and year four of owning your computer. (Google Statistics)

WHY DO HARD DRIVES FAIL?

Hard Drives fail all the time – even backup hard drives – it is not a matter of if they will fail, but when. In a five-year period, you will lose data from a faulty Hard Disk. They are moving parts and very delicate. Don't become a data loss statistic – be proactive, you will be so glad you spend the time to back up your precious memories. It's not a matter of "if" you will have a computer failure resulting in data loss, but "when". You've heard the saying before- don't put all your eggs in the one basket. It's exactly the same for your precious data. Some people think taking all their data off their computer and putting it onto an external Hard Drive will somehow make the computer run faster.

WE HELP SOLVE YOUR BUSINESS TECH PROBLEMS

IT solutions that work specifically for your business from purchasing the right equipment to managing your IT environment.

Qualified Team
Working with hundreds of local businesses like yours to implement IT systems.

Priority Response
Reliable IT support that allows your business to quickly get back on track.

Great Proactive Support
Resolving more than just issues, we identify and repair the underlying cause.
